

### Key messages

- Overall situation:** The delayed start and poor performance of the 2019 Gu' rains has resulted in severe drought conditions across Somalia pushing millions of people into acute food insecurity, with dire consequences especially for marginalized and displaced communities. The adverse climatic conditions, combined with other persistent drivers of humanitarian crisis, such as armed conflict, displacement and a spike in internally displaced persons, are again pushing Somalia into a more severe humanitarian situation.
- Food security:** Somalia continues to experience extreme levels of food insecurity with 5.4 million people of the population being food insecure in August. Poor pasture conditions are reported in Mudug, Galgaduud, Bakool, Bay, Gedo and Middle Juba, with atypical livestock migration reported in Gedo. In northern and central pastoral areas, the availability of saleable animals remains low, constraining the ability of poor households to feed their families and purchase water for their animals.
- Malnutrition:** Nearly a million children under-5 years are projected to be acutely malnourished.
- Assistance:** The Somalia food cluster reports that there has been a significant scale up of emergency assistance since May 2019 which is likely preventing worse food security outcomes in many areas.
- Displacement:** An estimated 2.6 million people across Somalia remain internally displaced. Post-Gu assessment results indicate that most of the 14 major Internally Displaced Person (IDP) settlements are in Crisis (IPC Phase 3) or Stressed (IPC Phase 2) in the presence of humanitarian assistance.

### Food Security Outlook

October 2019 - January 2020

Source: FEWSNET

### Gaps and needs

- Without adequate and timely funding, World Vision will not be able to respond to the continuous nutrition crisis or to reach the most vulnerable children in need of health, education, protection and WASH services. Additional funding will also provide critical services to the internally displaced persons facing the spread of diseases and scale up activities in all regions.
