Sudan has made significant progress in ensuring populations have access to basic water, sanitation and hygiene services and facilities. As at 2019, an estimated 73% of the population had access to safe water, 25% were practicing hand washing with soap, and 31% had access to basic sanitation, according to the Sudan SDG 6 Plan. The situation however remains dire among the most vulnerable populations, particularly in areas that have experienced significant influx of internally displaced persons, refugees and returnees.

**Intervention**

World Vision has been working closely with local NGO partners and the Government to address some of the critical gaps in water infrastructure, basic sanitation facilities and hygiene services.

**Strategic goal**

To increase access to safe water, improved sanitation and proper hygiene for vulnerable populations is one of World Vision’s key strategic objectives.

**Strategic outcome**

Children are protected from water and sanitation related diseases.

---

**Our impact in numbers for 2019**

**Water**

- 153,100 PEOPLE gained access to safe drinking water and for household use
- 15,017 CHILDREN had access to safe drinking water in schools
