World Vision’s strategic intent

To use our global reach and grassroots connections to encourage vaccine acceptance and uptake by the world’s most vulnerable communities to save lives, protect livelihoods, and safeguard families and children from impoverishment and violence.

Our value proposition

**Global reach**

We are already partnering with massive networks of people to combat the spread and impact of COVID-19. Our networks include 300K faith leaders, 181K community health workers, government and private sector partners as well as our own humanitarian and development experts in remote, hard-to-reach, and difficult contexts around the world.

**Strengthen health systems**

World Vision’s principal role in the COVID-19 vaccine supply chain is to help prepare communities for vaccine uptake. This means ensuring that communities are accurately informed on the nature and purpose of each COVID-19 vaccine, that leaders and champions are equipped to support their constituencies, that public health decision makers understand vaccine acceptance barriers and the science of reducing vaccine hesitancy. We will also ensure planning processes include citizens and are accountable to them, that allocation strategies are equitable, and that front-line health workers are supported to provide vaccine services with quality. World Vision’s work will build on our existing COVID-19 response in more than 70 countries.

World Vision is responding to the devastating impact of COVID-19 in more than **70 countries**.

We have reached **54.3M+ total people**, including **24.2M+ children**, as part of our strategic objectives to limit the spread of COVID-19, strengthen health systems, support affected children, and collaborate and advocate for vulnerable children through health and nutrition, economic livelihood, child protection, and education interventions.

**So far we have:**

- **28.9M+** People received messages about preventing COVID-19 infection
- **113K+** Faith leaders equipped to work with communities to prevent infection
- **1.4M+** Children reached with targeted, age-specific health education
- **136K+** Community health workers trained and supported
- **14M+** Community members provided with masks, gloves, and other items to help prevent infection
- **10K+** People transported so their health care needs could be met
- **416K+** Medical personnel provided with personal protective equipment (PPE)

(data from January through September 2020)
Our Citizen Voice and Action (CVA) — an evidence-based, social accountability model — equips communities to hold their governments accountable for improvements to basic services. It has successfully been used in 700 programmes in 48 countries and strengthened relationships and direct accountability between citizens, policymakers, and service providers. It can be employed to address vaccine availability within countries and ensure that the impoverished, vulnerable, marginalised, and other typically overlooked communities are included in its distribution.

World Vision’s COVID-19 Vaccine Response | Capacity Statement
COVID-19

Even as COVID-19 vaccines are being rolled out, other prevention methods (e.g. wearing a mask, hand washing, etc.) will need to be widely promoted for the foreseeable future, especially given the high levels of vaccine hesitancy in some countries. World Vision has developed risk communication and community engagement guidance, in alignment with World Health Organization guidance, intended for training community health workers and volunteers, World Vision health staff, and other frontline workers on COVID-19 transmission, prevention, symptoms, treatment, home-based care, child protection considerations, and mental health.

Deep experience delivering health solutions

Based on our experience responding to other crises, we know that incorporating vaccinations into our armoury of public health responses, accompanied by community mobilisation and effective communications, enables individuals to be protected and communities to contain outbreaks.

HIV and AIDS

In 2000, World Vision launched the ‘Hope Initiative’ to respond to the HIV and AIDS crisis. By using the same technical models we are using to combat COVID-19 (i.e. Channels of Hope, collaborative government partnerships, health care support), we successfully:

- worked with clergy and lay leaders to implement solutions that affect people living with or affected by HIV and AIDS (e.g. combating gender violence, protecting children, and reducing stigma)
- trained community health workers to maintain relationships and provide palliative care
- partnered with governments to influence health-care policy and schools to promote awareness
- identified and screened people living with HIV for tuberculosis so they could start on prevention regimes and helped them to enrol in antiretroviral drug programmes
- trained children and young people on how to avoid risky behaviour and prevent the spread of HIV
- improved service delivery to HIV-affected populations and supported HIV health-care providers
- organised community groups for HIV prevention and care.

EBOLA

World Vision was chosen to be a part of a US$40M initiative to bring an Ebola vaccine solution to West Africa as a member of the Ebola Vaccine Deployment, Acceptance, and Compliance (EBODAC)- consortium, that worked in four countries to develop strategies and tools to promote the acceptance and uptake of new Ebola vaccines, so the right persons would receive the right vaccine at the right time.

EBODAC used community engagement, enabling technologies, such as iris scanning and phone messaging, as well as clear communication methods to build trust and address misconceptions surrounding the vaccine in the community. EBODAC also built local knowledge and capacity and strengthened health systems by working with ministries of health and community health workers by providing training and preparedness activities for the potential future deployment of a licensed vaccine.

ZIKA

Drawing on its successes and lessons learnt from the fight against Ebola, World Vision launched a response to the Zika outbreak in five countries in 2016, working with local community and faith leaders to provide 1.9 million beneficiaries accurate prevention and protection messages and dispel misinformation and rumours, provide health services and protection kits and enhance surveillance and monitoring.
POLIO

The CORE Group Polio Project (CGPP) has contributed to polio eradication by successfully engaging civil society, particularly the non-governmental organisation (NGO) community. This engagement, which World Vision has directed since 1999, has contributed to improvements in routine immunisation programmes, polio campaign quality and surveillance for acute flaccid paralysis in many challenging geographic areas. To achieve this, the CGPP has collaborated closely and supported polio eradication partners to focus on high-risk areas with marginalised or hard-to-reach populations where health systems and immunisation programmes have also been weak.

CGPP Secretariat’s model for coordinating vaccination stakeholders has also been proven to be highly effective. CGPP also pioneered effective development of community-level champions to counter vaccine misconceptions. Many of the innovations and approaches that the CGPP helped to develop are now being replicated by governments and international agencies to tackle other public health priorities, such as COVID-19, in underserved and marginalised communities around the world.

Strengths

70 years of programming experience

- 15 million children per year reached per year through World Vision's health and nutrition programmes (US$288 million total spending from October 2019 to September 2020)
- US$7 billion committed to our “Every Woman, Every Child” for the period 2019–2030
- 8.6 million people, including 5 million children, were fed through food programmes in 29 countries
- 3.4 million people received access to an improved water source at a community level
- 2.6 million people gained access to household sanitation
- 136,000+ acutely malnourished children treated, 90% of whom made a full recovery
- 48,500 pregnant and breastfeeding mothers treated by local health-care staff and volunteers, improving their health and that of their babies
- World Vision procures and distributes between US$1–5 million per year in essential medicines (not including vaccines), meaning World Vision field offices are well acquainted with essential medicine importation, warehousing, and distribution.

90+ countries

- 1,600 area programmes and humanitarian responses
- 50,000 staff and volunteers (37,000 are employees)
- had an impact on 200 million vulnerable children’s lives
- 152,000 community health workers supported across 46 countries
- 25 million children (including sponsored and non-sponsored children) supported on their journeys to overcome the root causes of poverty and injustice
- 20 million people, including 13 million children, were helped through 76 global emergency responses.
- 36 million children served with US$670 million in cash grants alone
- US$2.9 billion raised in 2019
- Every 60 seconds, a family gains access to clean water

(data as of 2019 report)

Partnering expertise

20,000+ partners in nearly 100 countries
US$46.3M emergency funds provided to local partners

World Vision is:

- one of the most engaged members of the Steering Committee for Humanitarian Response (SCHR)
- co-lead of the global Collaborative Cash Delivery (CCD) Network of 15 global NGOs engaged in localising cash programming
- actively engaged in strategic conversations about the COVID-19 response within three key global NGO consortia, of which it is a member, SCHR, InterAction, and International Council of Voluntary Agencies (ICVA)

- “World Vision is a great partner . . . we have a lot to do, we are going to do it together!” David Beasley, World Food Programme Executive Director

World Vision's COVID-19 Vaccine Response | Capacity Statement

1 COVAX is an initiative to support the research, development, and manufacturing of COVID-19 vaccine candidates and negotiate their pricing to ensure that people in all corners of the world, regardless of income, will have equal access to the COVID-19 vaccines, that are approved as safe and effective, when they become available. Berkley, S. (2020) “COVAX explained,” Gavi, The Vaccine Alliance. Accessed 23/11/2020. Available from: https://www.gavi.org/vaccine-work/covax-explained.

2 World Vision accomplishes this via the mobile online training (MOTS) platform, which aims to strengthen the instruction provided to community health workers and make training more effective and accessible, even to those with limited literacy, by providing interactive modules with training on vaccines and emergency response practices to community health workers via an interactive voice response system that delivers audio files in local languages to remote workers’ mobile phones. They can listen to the training materials on their own time, giving them greater flexibility with their learning while reducing the cost and infection risk (compared to in-person training sessions).

3 It focuses on eight determinants: perceived susceptibility, perceived severity, perceived action efficacy, perceived social acceptability, perceived self-efficacy, cues for action, perception of divine will, and positive and negative attributes of the action (i.e., the behaviour).

5 including other World Vision and partner staff.

6 EBODAC was funded by the European Union. Other consortium partners included Janssen Pharmaceuticals, London School of Hygiene and Tropical Medicine, and Grameen Foundation.

7 “CGPP is a multi-country, multi-partner initiative providing financial support and on-the-ground technical guidance and support to strengthen host country efforts to eradicate polio.” https://coregroup.org/our-work/programs/core-group-polio-project/

8 Choudhary (2018).

9 The Global Polio Eradication Initiative is a public-private partnership led by national governments with six core partners – the World Health Organization (WHO), Rotary International, the US Centers for Disease Control and Prevention (CDC), the United Nations Children’s Fund (UNICEF), the Bill & Melinda Gates Foundation, and Gavi, the Vaccine Alliance. Its goal is to eradicate polio worldwide. https://polioeradication.org/

10 This procurement is guided by strong internal policy and standard operating procedures.
