NAVIGATING THE NEXUS:
A Brighter Future for Children in Urban Contexts in Iraq

Our approach to fragile contexts
A brighter future for children: World Vision’s Fragile Contexts Approach

Two billion people live in countries where development outcomes are deeply affected by fragility, conflict and violence and which are some of the most dangerous places in the world to be a child. In these fragile contexts children face extreme levels of abuse, exploitation, deprivation and violence, often for generations.

Through its global strategy, Our Promise, World Vision is aligning its humanitarian, development, peacebuilding and advocacy efforts to address fragility. Based on more than 70 years of experience working in fragile contexts, World Vision has developed a Fragile Contexts Programme Approach (see diagram below) to support its efforts to expand and deepen its impact. Its approach has informed global frameworks, such as the Organisation for Economic Co-operation and Development’s (OECD) Development Assistance Committee (DAC) Recommendation on the Humanitarian-Development-Peace Nexus; and, in turn, is informed by them.

World Vision’s Fragile Contexts Programme Approach (FCPA) has been piloted in multiple countries, with more planned in the future. World Vision’s goal is to make a sustainable difference in the lives of the most vulnerable girls and boys so they can survive, adapt and thrive now and in the future despite fragility. At the heart of the FCPA is the agility to shift from meeting immediate humanitarian needs to addressing root causes even in the context of continued fragility, in order to support transformative change whenever possible, so that communities can build resilience to shocks over the long term.

In 2017, through its global strategy, Our Promise, World Vision made a commitment to direct 27 per cent of its global funding to fragile contexts by 2020. In 2018, World Vision directed 28 per cent of its funding to ten of the most fragile countries in the world where it operates and reached 10.1 million of the most vulnerable people. Almost 60 per cent of those it reached were children.

World Vision is committed to continue to grow this commitment through diverse funding, partnerships and knowledge sharing.

In 2019, World Vision directed 35 per cent of its funding to ten of the most fragile countries in the world where it operates and reached 9.7 million of the most vulnerable people. Over 80 per cent of those it reached were children.
Executive Summary

Iraq is one of the most fragile states in the world, fraught with challenges after decades of conflict and instability. The political and economic consequences of the COVID 19 pandemic have been especially disruptive in Iraq, where political turmoil and societal distrust have risen and the economy has been decimated by the significant decline in oil revenue as a result of diminished global demand in 2020, which had long-term effects on the economy including inflation as well as disruption to services which have yet to fully resume. With millions of vulnerable Iraqis returning to their homes, and more than one million still displaced following conflict, the sudden shock of COVID 19 saw poverty rates increase and humanitarian needs deepening. This was followed by a drought year in 2021, which is proving to be an impediment to returns and to economic recovery as rural livelihoods are being decimated.

The international community has sought to address more comprehensively the complex challenges of fragility by advancing a nexus approach linking humanitarian, development and peacebuilding efforts. Moreover, with global fragility increasing at a time when more people than ever before are entering cities, urban areas have emerged as a new centre of fragility. Urbanisation has simply shifted the landscape of poverty, reproducing many of the risks experienced in rural settings and introducing a cascade of new ones that have increased need. Iraq, increasingly urbanised and plagued by multidimensional fragility, thus represents the imperative of realising a better nexus approach.

The following case study examines World Vision’s experience implementing a nexus approach for programming in Northern Iraq, which comprises governorates controlled by the federal authority and the Erbil-based Kurdish regional government. Following the outbreak of conflict with the Islamic State of Iraq and the Levant (ISIL), World Vision responded to the crisis and has continued to work to meet humanitarian and recovery needs while working to establish longer-term solutions to the ongoing displacement crisis. World Vision’s adaptation of programming to strengthen linkages among humanitarian, development and peacebuilding objectives in Iraq has identified a number of key enabling factors for nexus work to be successful:

- **Establishing long-term presence and partnership** enables World Vision to build trust and credibility with local government, community leaders, religious leaders and cross-cutting groups including cultural minorities, women and youth, and people living with disabilities. World Vision’s multiyear partnerships with faith actors and local civil society to reach out across the nexus to those who have a longer-term stake in the context have especially been useful in ensuring longer-term impact.

- **Partnering with local and international organisations** creates opportunities for coordination across cluster programming to better enable nexus objectives. Partnership with local organisations in particular is important to access communities and to build trust and acceptance while also ensuring long-term sustainability.

- **Utilising a participatory approach and investing in local capacity** improve the durability of programming, essential as World Vision has expanded into more medium- and long-term development programming.

- **Robust advocacy** generates opportunities for a holistic response through flexible project and funding parameters, providing World Vision with access to more flexible multiyear and multi-sectoral funding.

This case study also identifies potential impediments and barriers to the operationalisation of the nexus in Iraq and provides recommendations to governments, donors, international financial institutions and World Vision on how to overcome them. Specifically:

- **The Federal Government of Iraq (GoI) and the Government of the Kurdistan Region of Iraq (KRI)** should partner with international humanitarian actors to pursue durable solutions for returnees and internally displaced persons (IDPs) and prioritise the restoration of housing and livelihoods infrastructure as well as assist families to resettle voluntarily, safely and with dignity given existing economic challenges.

- **Donor agencies and international financial institutions** should provide sustained, flexible, multiyear and multi-sectoral programme funding while extending the timeframe of humanitarian assistance to meet the needs of vulnerable returnees, IDP populations and host communities who continue to require assistance. They should also continue to engage in policy dialogue at the national level to cultivate a better enabling environment and improve coordination across programming.

- **World Vision** should continue to highlight some of the current challenges and opportunities for programming in Iraq, focusing on existing funding sources that demonstrate successful and flexible mechanisms for future donor support. It should continue to emphasise cross-cutting interventions in diverse urban, peri-urban and rural contexts. Specifically, in urban contexts World Vision should also strengthen its coordination and collaboration role to build alliances with other humanitarian stakeholders in order to achieve our goals by better working across the nexus.
Methodology

This case study relies on a mixed-method research methodology that included a desk review of internal and external literature, an analysis of project documentation and interviews with key stakeholders. The literature review draws upon the narrow amount of literature specific to the application of the nexus approach in fragile urban contexts, along with relevant literature addressing experiences and data at the local and national levels. World Vision researchers held 10 key informant interviews, speaking to World Vision in-country and global staff, peer nongovernmental organisations (NGOs) and local partners over various teleconferencing platforms. Interviews focused on identifying key factors enabling and/or challenging programme implementation and on offering wider reflections on how stakeholders can further improve operationalisation across the nexus.

Limitations on the study

As with other researchers operating in the international humanitarian and development space, conditions resulting from the global COVID-19 pandemic have influenced this study:

- All interviews were conducted remotely at a time when in-country staff were under significant added strain. The researchers were unable to carry out any field visits and had to rely on desk reviews and a limited number of interviews with a smaller number of available key informants.
- Staff turnover of some key informants meant that interviews were relied on heavily as they happened and in some cases further follow-up questions could not be clarified.
- Few external partners were able to dedicate time and resources to this research, which was not helped by the remote way of working.
- Some actors, especially national organisations and government representatives, were unable to be reached.
1. Introduction

For more than four decades Iraq has borne the consequences of conflict and instability, stunting its ability to escape recurring crises and engendering fragility across all dimensions. While Iraq is considered an upper-middle-income country within the Middle East and North Africa region, this designation overlooks a highly unequal distribution of wealth. Moreover, recurrent conflict inside the country and the region has precluded stability, leaving millions of people displaced across its territory and generating significant humanitarian need. A more appropriate and holistic indicator for the context in Iraq is the States of Fragility Index powered by the OECD, which puts Iraq as the 11th most fragile state in the world, out of 175 states it examines. In the aftermath of large-scale military operations against ISIL, the forward-looking orientation toward development following the Iraq War (2003–11) has once more been impeded by a severe economic contraction and the outbreak of the COVID-19 pandemic, exacerbating the country’s fragility along multiple dimensions.

The campaign of violence unleashed by ISIL across Iraq and Syria has left millions of refugees and IDPs across heavily urbanised Northern Iraq, primarily in the Sulaymaniyah, Duhok, Erbil, Kirkuk and Ninewa governorates.

Northern Iraq has increasingly urbanised in recent decades, prompted not only by the greater economic opportunities available in cities, but also by patterns of displacement stemming from conflicts including the Iraq-Iraq War (1980–88), the Gulf War (1991), and the upheaval that has followed the US-led Iraq War (2003–11). Nearly 250,000 Syrian refugees remain displaced in Iraq as of January 2021, primarily in refugee camps across the Duhok, Erbil, Halabja and Sulaymaniyah governorates that make up the semi-autonomous, urbanised KRI. The overwhelmingly urban population in the Duhok, Erbil and Sulaymaniyah governorates of the KRI has reached 75%, 84% and 85% as of 2014, respectively.

The periodic influx of refugees also continues to exacerbate humanitarian need in Northern Iraq, such as the more than 12,000 Syrians who fled to the KRI in October 2019. Likewise, 6.1 million Iraqis were displaced by violence from 2014 to 2017, and while more than 4.8 million have returned to their areas of origin, they continue to face significant humanitarian need, as do the more than 1.2 million Iraqis that remained displaced as of January 2021.

Iraq’s vulnerable returnees reside in largely urbanised areas alongside nearly 1 million non-camp IDPs, with 77% of the non-camp displaced residing in the urbanised governorates of the KRI. Urban areas with high concentrations of poor and new migrants are challenged by insufficient infrastructure, housing precarity and a dearth of viable employment opportunities. Destruction of housing poses perhaps the greatest challenge for returnees and non-camp IDPs, with damage to the housing sector as a result of the conflict with ISIL estimated at $16.1 billion and more than half of the 138,051 residential buildings damaged or destroyed.

As a result, vulnerable poor in urban settings are more likely to treat their residence as temporary, directly contributing to higher rates of intra- and inter-city urban mobility. Indeed, 98% of IDPs residing in the Ninewa Governorate are originally from the governorate – where nearly two-thirds of all housing was damaged – indicating that many are unable to return to their districts of origin and have become secondarily displaced in an effort to access available resources. This scattered displacement among host communities in large urban settings has limited IDPs’ ability to access humanitarian assistance, as organisations have struggled to programme adequately for an increasingly mobile population. However, because of the often unplanned nature of non-camp displacement, with 30% of IDPs departing camps as a result of their closure, humanitarian need is often even greater. More than four-fifths of non-camp IDPs require humanitarian assistance, with more than half in acute need, characterised by an inability to meet basic needs in healthcare, food, education and household expenditures.

While the GoI has been relatively tolerant and welcoming of most Syrian refugees within its borders, it has been far less accommodating of IDPs, especially of in-camp IDPs. Impatient with continued displacement and displeased by its optics, the GoI has moved rapidly to close all remaining camps across federal territory. These rushed camp closures have resulted in many international humanitarian actors facing challenges to pursue durable solutions for in-camp IDPs. Between October 2020 and January 2021, 16 formal IDP camps under GoI administration were closed with insufficient planning, pushing more than 42,000 people to return to their places of origin. It is estimated that the current series of camp closures combined with previous camp closure and consolidation efforts will force more than 100,000 returnees to face homelessness and severe vulnerability in their places of origin, finding their homes destroyed and facing food and water shortages along with limited opportunities for employment, causing the humanitarian needs of those displaced by the closure to deepen.

 Refugees and IDPs have fared far better under the KRI government, which has worked with international actors to provide humanitarian aid and transition toward more durable solutions. Nearly all remaining in-camp IDPs are located in the KRI, estimated at nearly 200,000 people across 25 camps as of January 2021.

The uneven responses to the displacement by the GoI and the KRI are indicative of Iraq’s broader political fragility. The KRI has maintained autonomy from the GoI since 1992, though only formally recognised in 2005 following the overthrow of Saddam Hussein. The power-sharing agreement between the two governments has been continuously contested by both, with disagreement about

The stalemate between the KRI and the GoI has undermined governance nationally, contributing to instability at all levels of government. Public trust in the GoI has increasingly eroded over the past decade, fuelled by grievances over corruption, weak accountability, lack of employment opportunities, and inadequate service delivery. In particular, the prevalence of corruption has become a central concern of Iraqis, with a plurality (32%) ranking corruption as the most important challenge facing the country and few (22%) believing that the GoI is committed to fighting corruption, according to the most recent Arab Barometer survey (2019). This distrust in the state and the political system, especially among male youth, along with economic grievances, have fuelled widespread protests across the country since October 2019, with ‘public trust in the government’s capacity to address the country’s challenges dropping.’

Against this backdrop, fragility has been exacerbated by the deterioration of the Iraqi economy amidst the collapse in oil prices and the outbreak of the COVID 19 pandemic. Iraq’s economy is heavily dependent on oil revenue, accounting for about 60% of the country’s gross domestic product and, most important, more than 90% of Iraqi federal government revenue. With the federal public sector financed almost exclusively by oil revenue, the unprecedented fall in oil prices in early 2020 has battered an economy where the public sector is by far the largest employer.

The KRI’s revenue-sharing from oil sales and the GoI’s fiscal transfers central to the dispute. While the KRI has in recent years prioritised oil revenue towards its own needs, the GoI has disbursed fiscal transfers ‘unevenly, erratically, and partially.’ With the balance of power increasingly shifting toward the GoI, tensions were exacerbated in 2017 by its seizure of the oil-producing Kirkuk Governorate from KRI-allied forces in response to a referendum to establish its independence.
vast informal economy, with 72% of men and only 16% of women participating in the formal labour force, among the lowest rates for women in the world.35 Even prior to current economic challenges, nearly half of all Iraqi youth were not employed, in school or receiving training.36

With a faltering economy and tenuous political stability, the COVID 19 pandemic arrived at a particularly challenging time and has exacerbated deeply rooted issues. Restrictions imposed to control the spread of COVID 19 have challenged agriculture, services and the fledgling tourism industry, with Iraq’s service sector, which comprises around half the non-oil economy, severely affected.37 Across the service sector, 39% of employees faced unemployment and 90% saw their hours reduced during 2020, with women and young people particularly hard hit.38 COVID 19 has also exacerbated fragility across political and societal dimensions in Iraq. A deep societal distrust in the government exists following years of instability, growing inequality and allegations of corruption. Due to these factors a large gap exists between social protection requirements and the government’s ability to satisfy them, particularly for Iraq’s most vulnerable; this further fuels distrust in the government and dissatisfaction, which pushes people towards alternative power structures and makes them vulnerable to recruitment to violent agendas of various armed groups.

Iraq’s healthcare system, already weakened by a myriad of challenges including war damages, corruption, underinvestment and ‘brain drain’ has been particularly strained by the COVID 19 pandemic.39 As a result, Iraqis were forced to turn to their families, neighbours and community members for help. This has resulted in people further losing confidence in government institutions.40

The confluence of economic, political and social fragility, each exacerbated by the outbreak of COVID 19, has generated significant humanitarian needs and rolled back development gains, especially for Iraq’s most vulnerable populations. For Iraqis, including 4.8 million returnees, 1.2 million camp and non-camp IDPs, and 250,000 Syrian refugees, overall humanitarian needs remain great, as does the need to create durable solutions for displacement.41 As of January 2021, more than 1 million IDPs and 3.1 million returnees are in need across Iraq, including 730,000 needing help with food security, 3.4 million with emergency livelihoods, 2.2 million with healthcare, and 1.3 million with education.42 Among the most vulnerable, 1.7 million children and 1.3 million women require protection from violence.43 Meeting this urgent humanitarian need is essential to stabilising a local context that will enable Iraqis to create durable solutions and work to close the nexus gap.

2. **World Vision’s urban work in Iraq**

World Vision has worked on and off in Iraq since 1999, beginning emergency relief operations in Northern Iraq through a newly established field office in 2014 in response to urgent humanitarian needs spawned by the conflict with ISIL. Focusing on WASH (water, sanitation, and hygiene), child protection, education, and livelihoods interventions, World Vision has broadened the scope of its work since the conclusion of large-scale military operations in 2017 to include more nexus-style approaches across its programming. This includes incorporating elements of developmental education and life skills, as well as livelihoods interventions, and linking these to more short-term humanitarian and nexus interventions.

World Vision’s work in Iraq previously centred on Northern Iraq, with operations in Duhok, Erbil, Sulaymaniyah, Salah al-Din, Kirkuk, and Nineveh governorates. As of 2020, though, only 30% of the programme is in the three governorates of KRI, with 70% of programming having shifted to respond to the needs of the most vulnerable returnees who are going back to their places of origin in Nineveh, Kirkuk and Salah al-Din, which are in the control of the GOL. In fiscal year 2020, World Vision programming reached 472,829 beneficiaries, including 254,350 children.

World Vision runs its food assistance programming in partnership with the United Nations World Food Programme (WFP), using primarily in-kind, cash and voucher modalities, covering both Iraqi in-camp and non-camp IDPs and Syrian refugees. Cash is distributed through Mobile Money Transfer, Money Transfer Agency and eVoucher transfer mechanisms.

World Vision currently provides food assistance to more than 250,000 people in Erbil, Duhok and Sulaymaniyah. As Northern Iraq is heavily urbanised, with good mobile money infrastructure and well-functioning food markets, the majority of food assistance to IDPs and Syrian refugees is provided by means of mobile money transfers, although World Vision also provides aid through eVouchers. In-kind transfers represent only a small share of all food assistance provided by World Vision.

Table 5. Food Assistance Transfer Modalities

<table>

World Vision’s humanitarian programming in Iraq is linked to its development interventions, acting as a natural programming extension across the nexus spectrum. For example, World Vision uses its food assistance programming in refugee and IDP camps in Nineveh, Duhok and Erbil to identify promising youth for participation in its education and life skills for livelihoods Empowerment in Action (EMPACT) programme, a development-oriented project that provides intensive practical technical, financial and language instruction to improve livelihood opportunities. The programme also provides beneficiaries with laptops and internet connections which, in conjunction with micro-work freelance training, are intended to establish the skills and connections necessary for livelihood opportunities. EMPACT draws participants from all vulnerable populations and applies a gender lens by targeting female youth for enrolment. World Vision’s education programming, including EMPACT, reaches nearly 100,000 beneficiaries annually. Around 50% of beneficiaries are girls/women for the education programming, even though EMPACT targeted 60% of beneficiaries being women.
Navigating the Nexus

A Brighter Future for Children in Urban Contexts in Iraq

April 2022

World Vision’s WASH assistance programmes are likewise centred in the Erbil, Duhok and Sulaymaniyah governorates, although projects have also been undertaken in Ninewa and Kirkuk. In the past, World Vision has worked with local water authorities to rehabilitate water treatment plants and improve water supply, moving towards nexus-style programming by establishing new water sources through boreholes serving both camp populations and host communities in order to ensure continuity through improved local capacity while simultaneously building social cohesion. In addition, in 2019, World Vision introduced child-focused hygiene promotion and water conservation at a regional scale in partnership with the Sesame Workshop. The Access to Safe Clean Water for Children Project is an example of World Vision’s WASH interventions, providing access to safe water for more than 86,000 people annually in nearly 14,500 households among returnee and IDP communities in the Ninewa Governorate.49 Overall, World Vision’s WASH programming in Iraq reaches more than 210,000 beneficiaries.50

World Vision’s health intervention in Iraq focuses on primary healthcare (PHC), providing comprehensive PHC services through approximately 100,000 consultations annually.51 In addition to comprehensive PHC services, World Vision incorporates a nexus-oriented programme approach aimed at strengthening local systems, includes the provision of specialised training for local Department of Health nurses, doctors and midwives to bridge skills gaps as well as mental health services. In particular, World Vision works with vulnerable populations across Ninewa, Anbar and Salah al-Din, who witnessed direct conflict with ISIL.52 Through specialised and nonspecialised mental health services, World Vision works to improve mental health issues arising due to the violence and human rights violations experienced during the conflict with ISIL. World Vision’s health programming in Iraq reaches more than 30,000 beneficiaries.53

World Vision has also moved to link humanitarian programming to long-term livelihood interventions, which have reached nearly 33,000 people, with an emphasis on engaging youth.54 World Vision has leveraged its long-term community presence and investment in local communities to establish durable livelihoods interventions since 2014, and while COVID-19 has exacerbated immediate need, ongoing programming continues to move from lifesaving relief to longer-term solutions as the pandemic abates. The more than 4.8 million returnees and the 1.2 million IDPs that remain deterred from returning home are primarily challenged by the absence of sustainable livelihoods and employment opportunities that has left them dependent on humanitarian assistance, ultimately forcing many to incur high levels of debt or sell off assets, and still others into secondary displacement. World Vision’s livelihoods programming in Iraq focuses on supporting micro, small and medium enterprises (MSMEs), providing access to financial services for business rehabilitation and expansion as well as vocational and business education necessary to build inclusive, market-driven linkages in the areas with high numbers of IDPs and returnees.55 The Sustainable Livelihoods and Economic Recovery programme funded by the United Nations Development Programme (UNDP) provides a number of long-term interventions, including skills-development training and job-placement opportunities.56 Since 2020, World Vision has begun comprehensive microeconomic development interventions through support from the Australian NGO Cooperation Programme (ANCP).57 ANCP is a unique development programme that provides multiyear funding to a select group of effective NGOs. Its allocation of long-term livelihoods funding to World Vision Iraq programming was a result of successful advocacy by World Vision Australia with the Department of Foreign Affairs and Trade of Australia to have Iraq included as a location for longer-term development funding.

3. Enabling factors for successful work to strengthen the nexus programming and its positive impact on the Iraqi Population

1. Long-term community presence and investment in local capacity to improve the durability of solutions

World Vision’s commitment to stay, deliver and address community needs year on year, often requiring a delicate balance of mixing humanitarian and development donor funds and internal resources, has helped build significant trust. In Iraq, World Vision works to build partnerships with stakeholders including local government, community leaders, religious leaders; and across cross-cutting groups including cultural minorities, women, youth and people living with disabilities. Often this can take the form of building capacities of local authorities and local civil-society actors including project implementation committees who are empowered in a number of ways to influence not only the design and implementation of the projects but to also to be able to work with local authorities to realise other issues of common interest.

World Vision staff noted that faith, irrespective of denomination, is typically an entry point for building trust with and access at the community level. This has been paramount as World Vision has expanded into more medium- and long-term development programming, with projects like the UNDP-funded Sustainable Livelihoods and Economic Recovery intervention in Ninewa. This project was developed after substantial context mapping to enable inclusive integration across marginalised communities in order to build sustainable livelihoods, or ‘making markets work for the poor.’ World Vision staff stressed that deepening the investments from short-term humanitarian assistance to longer-term livelihoods has been instrumental to the success of interventions past the project implementation period, with even short-term programming emphasising the long-term nature of the organisation’s commitment.

Building trust across a wide spectrum of partners has enabled World Vision to programme across the humanitarian and development spectrum, and savvy relationship building among local leadership has enabled the organisation to venture into limited social cohesion programming, albeit indirectly. While both the Gol and KRI governments are sensitive to explicit peacebuilding interventions, especially when undertaken by international NGOs, World Vision has had success with facilitating social cohesion through programming that creates shared, longer-term objectives among vulnerable communities. Staff noted that this was evidenced on a previously completed women’s economic empowerment project that jointly engaged diverse communities in a savings group. Ultimately, World Vision benefits from its long-term engagement and localisation strategies, ensuring programmatic durability by reflecting societal needs rather than elementarily targeting local communities for interventions.

2. Partnerships with local and international organisations create opportunities for coordinated programming across nexus challenges

As one of the largest multi-mandate organisations globally, World Vision has been able to leverage its position to coordinate across cluster programming to better enable nexus objectives. World Vision works with multiple local and international organisations to deliver programmes that are effective and reach the most vulnerable communities.
In Iraq, World Vision is among WFP’s largest partners, implementing 90% of the organisation’s cash and voucher programming for both refugees and IDPs.60 Serving as a primary WFP partner has better enabled World Vision to coordinate across clusters, enabling nexus objectives by connecting humanitarian assistance for vulnerable populations with long-term development programming like the livelihoods-oriented EMPACT project.

Moreover, World Vision’s global scale allows the World Vision office in Iraq to take advantage of global opportunities, obtaining access to more flexible funding via coordination with international World Vision offices focused on donor engagement. As programming has increasingly been oriented toward development objectives, World Vision has leveraged funding from private donations across its global network of offices in countries such as Australia, the United States, Canada and Germany, accounting for 40% of the 2019 budget.61 These donations have been especially useful in piloting programmes that have research components to demonstrate expertise and success in nexus programming. For example, the Women’s Economic Empowerment programme in West Mosul resulted in some very good results in reestablishing women’s livelihoods.62

World Vision also works with local NGOs across a number of sectors including education, child protection and WASH and ensures that the opportunity for mutual learning is maximised for both staff and our partners. World Vision shares its experience but also invests in building the capacity of local partners and committees to help ensure longer-term sustainability of programme impacts.

World Vision in Iraq has also effectively partnered with faith leaders to reach more local communities with messaging about several issues, including around COVID-19, and works through faith leaders to reduce violence against children and promote social cohesion where possible and appropriate based on World Vision’s existing programmes.

3. Robust advocacy generates opportunities for a holistic response through flexible project and funding parameters

Successful advocacy has enabled World Vision to access more sustainable, flexible, multiyear and multi-sectoral funding required in fragile contexts like Iraq. Beginning in 2020, Iraq was included in the Australia Government’s ANCP’s Partnership Agreement, which allocates funding for cross-cutting livelihoods projects over five-year periods and will focus on women’s economic empowerment in the Ninewa Governorate. The ANCP’s Partnership Agreement is the exception to the short-term funding norm that generates a nexus gap between humanitarian and development objectives. World Vision’s access to this funding source reflects the broad advocacy efforts of the international organisation and its country offices. World Vision staff stressed that Iraq’s inclusion in the ANCP framework was the result of World Vision’s advocacy in Australia, its robust relationship with the Australian government and its ability to advocate successfully that the Iraq context merited long-term development funding.
4. Barriers to successful work to strengthen the Nexus

1. Funding shortfalls produce challenges across the nexus spectrum

1.1 Funding silos between humanitarian and development donors create gaps in funding

World Vision’s work in Iraq demonstrates that closing the gap between humanitarian and development donor policies and funding is essential to bridging the nexus between humanitarian and development interventions. In a humanitarian context there is rapid and responsive funding available on a short-term basis for prescriptive lifesaving interventions. However, as humanitarian interventions phase out, funding drastically decreases, creating a ‘nexus gap’ for organisations that can work across the humanitarian/development continuum, like World Vision.

*World Vision Fiscal Year ends September 30

Although the COVID-19 pandemic has temporarily reoriented immediate needs in Iraq, the transition back towards long-term development amidst a protracted displacement crisis has produced a sizable decline in available funding. World Vision’s budget declined from US$17.3 million in 2018 to US$12.8 million in 2019 (see Table 8). Although funding for livelihoods programming increased nearly 50% over the year, funding for humanitarian interventions across the UN Clusters declined considerably, with the Health Cluster facing a decline of nearly 74.4% (see Table 9).

Despite the precarity generated by COVID-19, humanitarian funding for 2021 declined further to $11.14 million (see Table 8). Rather than adapting humanitarian funding modalities to transition into longer-term approaches associated with sustainable development, donors have increasingly lost interest in Iraq since the cessation of conflict with ISIL, generating a sizable funding gap that has not been addressed by bridge-style nexus funding or by development funding targeting vulnerable populations. While World Vision staff expressed confidence in their ability to attract new funds and have demonstrably done so (see growth in livelihoods budget in Table 8), the immediate funding gap reflects inconsistency between humanitarian and development donor policies.

The trend of humanitarian responses being underfunded within World Vision is in line with the wider humanitarian financial overview for Iraq. In 2021, the Humanitarian Response Plan, which identified US$607 million worth of needs, was only 62% funded, down from 2020, when 92% of the US$662 million required was funded.
1.2 Shifting priorities within government and international organisations limit immediate assistance for vulnerable communities

As priorities in Iraq have moved away from humanitarian assistance and towards long-term development, the breadth of assistance for vulnerable returnees – especially the more than 1.2 million Iraqis that remain displaced – has declined. Throughout the conflict with ISIL, IDP households relied on assistance from the Iraqi Ministry of Migration and Displacement and international humanitarian organisations. However, the changing priorities of the GoI and the international organisations have created a gap in support for households that remain displaced. According to evidence gathered by IOM across urban contexts in the GoI and KRI, ‘IDPs reported a concurrent decline in receiving aid and a drop in their ability to meet their basic needs, send children to school and get medical care, among other things. IDPs and returnees felt this shift in funding priorities acutely in their ability to meet their basic needs.’ World Vision staff highlighted that the organisation’s work has reflected this shift, with a steady reduction in overall beneficiary reach, including a shift in the sectoral focus of programming. From 2018 to 2019, the total number of World Vision programming beneficiaries declined by 40%, from 978,362 to 586,736. However, with 82% of IDPs reporting that they did not have any savings left and 63% reporting that they had recently borrowed money nearly three years after the conclusion of military conflict, the ability to create durable solutions to displacement remains challenged by a shortfall of immediate assistance for vulnerable communities amidst shifting priorities. World Vision staff also noted that this mobility precludes an accurate understanding of the effectiveness of interventions, the ability of World Vision to deliver consistent programming. Movement in an effort to access services challenges the organisation’s work has reflected this shift, with a steady reduction in overall beneficiary reach, including a shift in the sectoral focus of programming. From 2018 to 2019, the total number of World Vision programming beneficiaries declined by 40%, from 978,362 to 586,736. However, with 82% of IDPs reporting that they did not have any savings left and 63% reporting that they had recently borrowed money nearly three years after the conclusion of military conflict, the ability to create durable solutions to displacement remains challenged by a shortfall of immediate assistance for vulnerable communities amidst shifting priorities. World Vision staff also noted that this mobility precludes an accurate understanding of the effectiveness of interventions, the ability of World Vision to deliver consistent programming. Movement in an effort to access services challenges the ability of World Vision to deliver consistent programming. World Vision staff also noted that this mobility precludes an accurate understanding of the effectiveness of interventions, the ability of World Vision to deliver consistent programming.

2. Deteriorating economic conditions impede prospects for place-of-origin interventions across urban settings

The sharp decline in oil prices in 2020 and the economic challenges spawned by the COVID 19 pandemic present a substantial hurdle to the durability of livelihoods solutions as the recovery of the economy will take time. The formal employment landscape in Iraq is driven by oil dependency and a large public sector, which accounted for 14.7% of national wages in 2019. Thousands lost their income, so while prices are recovering, job availability is recovering more slowly. Given the underdevelopment of Iraq’s private sector and limited opportunities for formal employment outside of government, worsening economic conditions challenge the ability of livelihoods interventions to connect beneficiaries to the job market. World Vision’s Sustainable Livelihoods and Economic Recovery programme implemented in partnership with UNDP and funded by KFW and BMZ has among its expected objectives the creation of business opportunities and job placements for youth. However, with youth unemployment already high, World Vision’s ability to generate linkages to the formal private sector will be further challenged by the economic environment.

Urban areas with high concentrations of poor IDPs are challenged by a dearth of viable employment opportunities, making them prone to migrate. The destruction of local economies during ISIL’s occupation of Northern Iraq has had a negative effect on IDPs’ decision to return home, especially for those working in agriculture and services whose assets were destroyed. As noted from survey data collected by IOM, ‘Working for daily wages, the most common form of work in displacement amongst all respondents, is often not available in their place of origin. The unreliability of money earned through daily wages, even if only a few days a month … was seen as more sustainable in the places of displacement.’ Indeed, lack of livelihood opportunities at place of origin is a primary reason cited by non-camp IDPs for failure to return, along with insufficient funds to rebuild damaged housing. Only 25% of IDPs work in the same job sector as they did prior to displacement, creating additional volatility in finding employment while in displacement.

The dislocation of vulnerable populations and their movement in an effort to access services challenges the ability of World Vision to deliver consistent programming. World Vision staff also noted that this mobility precludes an accurate understanding of the effectiveness of interventions, presents a challenge to programming and deters long-term commitment among result-oriented donors.

3. Government disengagement limits scope of interventions and creates impediments to programming across the nexus

World Vision’s programming has been geographically and programmatically constrained while the organisation continues to build a relationship with the GoI. With the recent change of government, there is a marked effort by the Iraqi federal government systematically and consistently to engage with international humanitarian organisations, although given COVID 19 and a multitude of issues, these efforts are progressing slowly. Faced with widespread insecurity and instability, the GoI is facing challenges in assuming a significant share of the country’s recovery burden, which adversely affects international organisations’ ability to adopt new approaches and the coordination of beneficiary targeting.

Access challenge across the country for humanitarian actors is also an ongoing limitation on all programming due to a complex combination of political and organisational challenges, including the nascent and developing relationship between the GoI and the international community, as mentioned above; divergent priorities for aid and recovery; high operational costs; and a legacy of risk aversion by organisations.

Delivering aid to IDPs in Iraq has also become more challenging since 2018 as IDP camp closures and consolidation in GoI territory without adequate planning on durable solutions for the displaced populations have led...
to thousands of people moving into informal settlements which do not provide adequate basic services or any livelihood opportunities.78 The closure of these camps has created secondary displacement across fragile urban contexts, exacerbating housing challenges and creating protection concerns for the 40% of in-camp IDPs in female-headed households.79

The GoI and KRI are also not very supportive of third parties’ peacebuilding efforts. Both national and regional governments have been faced with increased civil unrest and protests in their territories, and trust in the federal government is low among all Iraqis.80 COVID 19 has only exacerbated these deep-rooted challenges by introducing economic fragility, straining the fractured relationship between the GoI and the semi-autonomous KRI.81 Faced with severe sensitivity to peacebuilding efforts, World Vision programming along this nexus spectrum has been constrained, limited to social cohesion efforts pursued only indirectly with accommodating local partners. The absence of explicit peacebuilding efforts creates a significant nexus gap in urban programming, as ethno-religious and political tensions at the community level impede the durability of interventions, especially for IDPs.82

4. Transitioning across nexus objectives reveals non-alignment and structural challenges

World Vision’s adoption of the nexus framework for its programming in Iraq has not eliminated the existence of well-identified institutional challenges across the nexus spectrum. While the framework aims to bridge the divides across humanitarian, development and peacebuilding objectives, World Vision staff highlighted the persistence of an emergency-oriented perspective despite the transition toward long-term programming. The continued operation from a humanitarian-centric perspective, which relies on the existing humanitarian cluster system established by the United Nations and employed by humanitarian organisations like World Vision, can act as a barrier to a move towards a more developmental orientation because there is no other system for coordination to replace this readily. This results in the perpetuation of siloed humanitarian/development cultures and a continued emergency-oriented perspective, reducing the effectiveness of meeting changing needs that can be enabled by an integrated nexus approach.83
5. Conclusion and recommendations

Despite the ongoing COVID-19 pandemic, Iraq finds itself at a crossroads. COVID-19 deepened humanitarian needs while humanitarian funding and policies were shrinking with an intention to shift towards a more developmental approach. In 2021, this was further complicated by the drought which is now fuelling even more secondary displacement as well as loss of livelihoods. Thus, following a crippling struggle with ISIL and the recent contraction of the oil-dependent economy and a drought, the country’s long-term challenges remain immense. To date, more than 4.8 million Iraqis have returned to their areas of origin, while more than 1.2 million IDPs remain deterred from returning home, in addition to the 250,000 Syrian refugees currently in Iraqi territory. The complex nature of the deep-rooted and long-term challenges Iraq now faces ever more so requires working at the nexus of humanitarian, development and peacebuilding action to improve the lives of vulnerable children, women and men living in fragile urban contexts.

The policy context in Iraq has demonstrated that nexus linkages between humanitarian and development work are possible, and when effective they have the potential to improve outcomes for vulnerable communities. Still, this progress alone is inadequate for cementing sustained change, and World Vision is committed to engaging in the country long term through its sustained commitment to local partners and coordination with UN/government and all parties who have a role to play in allowing parallel nexus programming to exist and be effectively funded. World Vision is dedicated to fostering durable solutions for displaced communities and will continue to leverage the global scope of its network to advocate for policies that can improve the lives of vulnerable people in Iraq. The following recommendations are based on World Vision’s experience in Northern Iraq and are meant to contribute to ongoing efforts to operationalise the nexus at scale in the country.

1. Funding and financing

- **The GoI and the KRI should:**
  - Provide funding to meet immediate needs and focus on assistance for housing infrastructure rehabilitation essential to establishing durable place-of-origin solutions. This requires that IDPs be integrated into the national response plan for funding.54

- **Donor agencies and international financial institutions should:**
  - Provide flexible, multiyear and multi-sectoral programme funding in line with Grand Bargain commitments and the OECD’s DAC Recommendation on the Humanitarian-Development-Peace Nexus, especially to local organisations.
  - Extend the timeframe of humanitarian assistance to ensure that the immediate needs of IDPs and vulnerable communities continue to be met as interventions reorient toward durable solutions for displaced communities and development-focused programming.

- **World Vision and likeminded organisations should:**
  - Highlight existing funding sources, like the ANCP Partnership Agreement, that demonstrate successful and flexible mechanisms for future donor support.
  - Continue to collect evidence of successful nexus approaches and highlight them as best practice to donors, financial institutions and all other stakeholders.

2. Partnerships, prioritisation and planning

- **The GoI and the KRI should:**
  - Suspend premature closure of the remaining IDP camps and partner with international and national humanitarian actors to pursue durable solutions for in-camp and non-camp IDPs as well as vulnerable returnees.
  - Prioritise the restoration of housing and livelihoods infrastructure, including improving the functioning of food markets, in light of the primacy of economic concerns of returnees and the displaced in a highly urbanised environment.

- **Donor agencies and international financial institutions should:**
  - Engage in policy dialogue at the national level to improve policy implementation in GoI-controlled governorates. By partnering with the GoI, donor agencies and the broader international community can ‘cultivate an environment enabling an inclusive national approach to social cohesion’85
  - Work with local organisations as idea generators, not simply as implementers of funding policies developed by donor agencies and international NGOs.
  - Establish funding criteria for partners, in line with UNDP recommendations, that prioritise programmes that demonstrate an integrated approach to fragility and that are based on
analysis across the humanitarian-development-peacebuilding spectrum.86

- **International organisations should:**
  - Strengthen the coordination and collaboration role to build alliances with other humanitarian stakeholders in order to work more effectively toward goals across the nexus.
  - Partner with organisations on research to better understand place-of-displacement dimensions, as existing research indicates that many IDPs are unlikely to return to their areas of origin.
  - Work with local organisations, community elders and faith leaders to reach out across the nexus to those who have a longer-term stake in the context.

### 3. Programming approaches

- **Donor agencies and international financial institutions should:**
  - Work with the GoI and the KRI to improve policy implementation and coordination across the nexus, particularly with regard to allowing for more robust programming around social cohesion efforts.

- **International organisations should:**
  - Continue with area-based approaches in urban fragile contexts that employ cross-cutting interventions targeting displaced populations, including refugees, returnees, IDPs, as well as host communities who are seeing their services and opportunities further stretch as returnees come back to the areas.
  - Focus on conducting comprehensive labour-needs assessments to ensure that programming interventions are market oriented, geared toward enabling vulnerable populations to resume their pre-displacement jobs or find employment in other sectors.87 Comprehensive context analysis is essential to ensuring that programming reinforces, rather than disrupts, existing systems.

Displaced populations typically continue to face significant needs after the conclusion of conflict, requiring support regardless of whether they return home or try to integrate elsewhere. Durable solutions for IDPs include their voluntary return home in safety and dignity, local integration elsewhere in country, or resettlement in another country. Durable solutions are achieved 'when internally displaced persons no longer have any specific assistance and protection needs that are linked to their displacement and can enjoy their human rights without discrimination on account of their displacement.' UNHCR, "ISAC Framework on Durable Solutions for Internally Displaced Persons," (April 2010), https://www.unhcr.org/50f94cd49.pdf.

WFP assumed leadership for food assistance programming following the exit of UNHCR, the agency mandated for aiding refugees that served in this role during the height of conflict with ISIL.
