

THE KILLER GAP

Thousands of children die every day after falling through the cracks created by the great health gap.

The most access to
health education,
awareness, prevention
and treatment

Not enough access
to health education,
awareness, prevention
and treatment.

TO CLOSE THE GAP, GOVERNMENTS MUST:

- Ensure greater political attention to closing the health gap
- Fix the missing data problem through routine collection systems that measure the health gap
- Engage and empower families and communities in the management of health services
- Prioritise child and maternal health in the post-2015 development agenda
