

World Vision® Senegal

2015 REPORT

HEALTH, NUTRITION, WATER, HYGIENE & SANITATION (WASH)

World Vision Senegal's health program aims to improve the health and nutritional status of all children under 5 and women of childbearing age.

81% of women gave birth with the assistance of a skilled attendant

373 health huts and sites

The weight of **83% of children** 0 to 23 months has increased

64% of households have access to safe drinking water

71% of children aged 0-11 months are adequately vaccinated

191,027 children under 5 and 232,445 women of childbearing age are targeted

\$3,781,639 is invested in the World Vision Senegal's health program to improve the health and nutritional status of all children under 5 and women of childbearing in its intervention areas.

Strategic Objectives for Health, Nutrition, Water and Sanitation

SO.1 Children under 5 and all women of childbearing age enjoy a good nutritional status

SO.2 Children under 5 and all women of childbearing age are protected against infections

SO.3 Children under 5 and all women of childbearing age live in communities with access to safe drinking water and sanitation

SO.4 Appropriate policies and mechanisms are implemented to ensure better health for children and provide an effective response during major public health emergencies.

Generating awareness around good nutritional practices

Water is precious. Use it wisely.
